

Get to know the RIMS advantage.

RIMS Sampling automates critical business functions, ensuring they occur consistently and with minimal oversight required. This powerful risk management tool increases workflow efficiency and supports regulatory compliance.

How Does Sampling Work?

Sampling is a flexible, configurable automation tool. With Sampling, a qualified RIMS user establishes that when specific conditions are met, a Sampling Action should occur automatically.

Sampling Features

Control

The Sampling tool features extensive configuration options, allowing you to limit a Sampling Record to highly specific circumstances or a broad range of events.

Risk Management

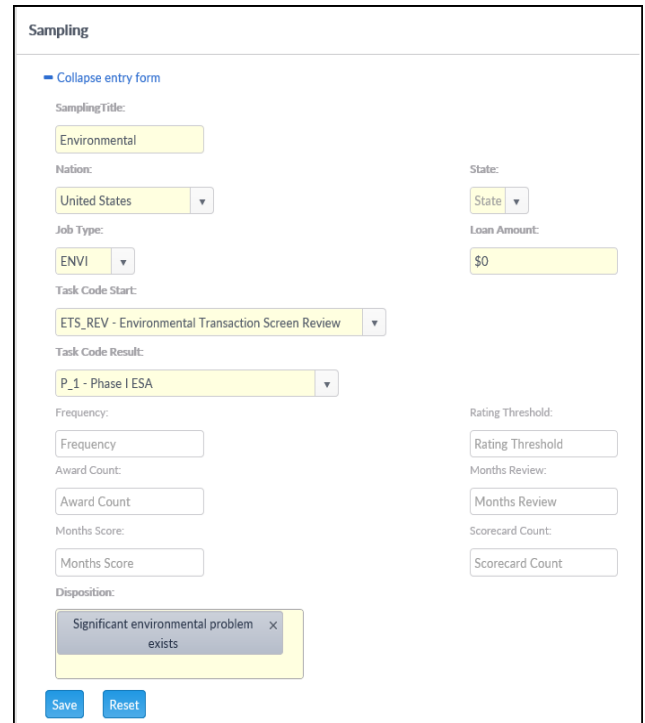

Create Sampling Records that trigger when a vendor's score falls below a defined value, when an appraisal order task is closed, or when a compliance review is completed under specific circumstances. Sampling simplifies risk management.

Convenience

When a Sampling Action occurs, all relevant parties will receive an email notification. The RIMS 8 logging system tracks everything, providing you with oversight and transparency.

Flexibility

RIMS supports an unlimited number of Sampling Records so that you can cover a variety of business scenarios concurrently.
